# Fon Hub

The Fon Hub allows you to integrate with our global WiFi network of over 21 million hotspots, in a simply and with guaranteed security. We take care of all your operational, billing, and reporting needs for both inbound and outbound traffic, with one, easy integration.

Whether you're looking for access to millions of hotspots worldwide, or want to monetize your own WiFi network, our Hub caters to all of your needs.
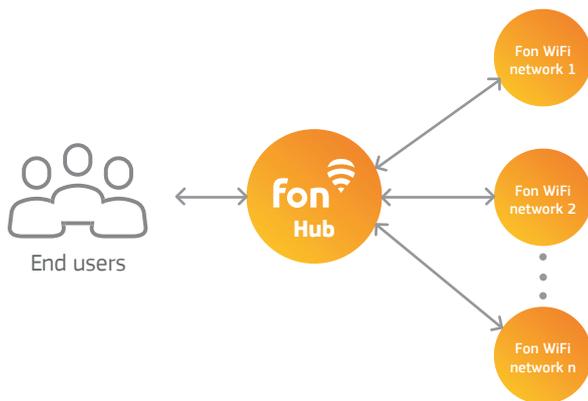

Simple and straightforward

Just one integration with our Hub connects you to over 21 million hotspots and more than 500 million users all over the world.

Our Hub puts the control back into your hands – you can choose how many networks and users you want to connect to, as well as manage access to your network. All of this is done with one simple integration, giving you the advantage of significantly reducing your operational efforts and time to market.

User authentication is simple with our technology

To ensure security for both you and your users, as well as a smooth connectivity experience, we offer three options for enabling user authentication to our WiFi network. We'll help you find the best user authentication option to suit your business:

		Description	Best for	Benefits	Requirements
	Radius integration	Your Radius server integrates with the Fon Hub	Telcos, MVNOs and MVNEs with a Radius server	Standard Radius integration process	• AAA Radius server • User credentials in username + password format
	Provisioning of user credentials	Securely upload your users' credentials to our provisioning system, via an API	Businesses who manage their own user database	Makes use of an existing user database	• Provisioning through API • User credentials in username + password format
	One-time SIM-based WiFi setup	Fon generates user credentials based on the SIM number, in a one-time setup	Businesses who have access to SIM cards within end users' devices	• No need for a user management infrastructure • Offers the best possible user experience	A SIM card in all end user devices

Reliable and up-to-date standards

We're compliant with WRIX WiFi Roaming standards.

These are a set of standards defined by the Wireless Broadband Alliance, designed to facilitate commercial WiFi connectivity between operators. The standards cover a number of important topics:

- **Interconnection (WRIX-i):** we enable partners to select which WiFi networks they want connect to

- **Data clearing (WRIX-d):** we process your usage data based on mutually agreed rates and generate automated reports

- **Financial settlement (WRIX-f):** our financial services include invoicing, reconciliation, dispute management, payments, foreign exchange, and follow-up on receivables

Ready to take your proposition to the next level?

We hear you! Our dedicated Hub already facilitates WiFi access between 40 partner networks. With our Hub, you'll be able to do all this, and more:

- Access millions of WiFi hotspots around the world

- Stay ahead of the competition by diversifying your proposition for end users

- Implement new business models designed to monetize your network and drive usage

- Analyse and track the performance of your network

Our commitment to you

The Fon Hub gives you an easy way to manage your inbound and outbound WiFi traffic, securely delivering reliable and robust information. We're always innovating to bring you the latest and most intelligent connectivity solutions, to keep you and your users connected.
