

# Fon Network Insights

As part of the Fon Hub, you'll have access to our market-leading reporting tool: **Fon Network Insights**.

## We're here to help you

Our aim is to give you total transparency and control over your inbound and outbound WiFi traffic. To achieve this, we offer you a simple and secure way to manage and monitor your WiFi usage and operations with us.

## What can you do with Fon Network Insights?

### View and download detailed, dynamic usage reports

- Available for both inbound and outbound traffic
- Generated and sent automatically
- Graphic dashboard with querying capabilities

### Automatic and comprehensive invoicing and financial settlement

- Compliant with WRIX WiFi roaming standards
- Available online, via email, or FTP

### Upload and download detailed hotspot information

### Track your roaming agreements

- Detailed visibility of your roaming relationships and contract conditions

### Secure, online access available 24/7

### Intuitive interface, with on-hand support team available

## How do I get started?

Once you've received login credentials, head to <https://fni.fon.com> to get started.

## What are WRIX WiFi Roaming Standards and why do they matter?

WRIX are a set of standards defined by the Wireless Broadband Alliance, designed to facilitate commercial WiFi roaming between operators. The standards cover a number of important areas:

- **Interconnection (WRIX-i)**  
We enable partners to select which WiFi networks they want connect to, at any time
- **Data clearing (WRIX-d)**  
We process your usage data based on mutually agreed rates and generate automated reports
- **Financial settlement (WRIX-f)**  
Our financial services include invoicing, reconciliation, dispute management, payments, foreign exchange, and follow-up on receivables
