

Fon SDK

Our Software Development Kit (or SDK) can be easily integrated into all kinds of apps, to give app users seamless, automatic connectivity to Fon's global WiFi network.

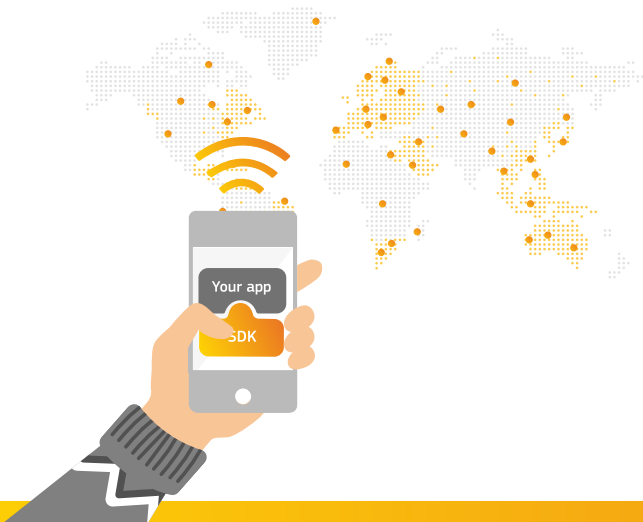

Adding WiFi connectivity to your app has endless benefits

Whether you're a network operator or an app developer, our SDK could help you to:

-  Boost user engagement
-  Improve customer satisfaction
-  Differentiate from competition
-  Reduce churn
-  Enhance quality of service
-  Lower data access costs, for both you and your users

Give your users the best possible experience

Once our SDK is integrated into your app, your users will enjoy seamless, automatic connectivity to our global network of more than 21 million WiFi hotspots. We guarantee connection to the best quality network available, with smooth transitions between networks that are totally invisible to the end user. Plus, our SDK is designed to ensure that the performance of your app is not impacted in any way.

Our SDK caters to all of your needs

- ✓ Simple integration with any iOS or Android app, maintaining all existing features and design
- ✓ Intelligent network selection, guaranteeing an enhanced Quality of Experience
- ✓ Automatic user authentication, regardless of the hotspot technology (WISPr, EAP, WPA and Open)
- ✓ No need for the app to be open to connect to WiFi
- ✓ Compatible with data encryption and any VPN
- ✓ Minimum power consumption, to maximize device battery life
- ✓ Hotspot location data available for use in a map

Our commitment to you

Our SDK gives you a simple way to add worldwide WiFi connectivity to your app. Here at Fon, we're always innovating to bring you the most innovative connectivity solutions, to keep you and your users connected.
